You Can Access Hidden iPhone Features With These Secret Codes

Just when you thought you had gotten your head around your iPhone, it turns out there are secret codes that you can dial on your phone to unlock lots of useful Apple features.

Entering *#31# lets you block your number for all outgoing calls, if you're very private about who has your digits. And if you want to just block it on certain calls, type #31# directly before their phone number and your iPhone will hide your number only for that call.
